Sans Digital Introduces MobileNAS MN2L

Santa Fe Springs, CA – September 13, 2007 – Sans Digital, a leading provider of high performance storage subsystems, today introduced a brand new 2 bay Mobile series NAS unit, the MN2L.

The MobileNAS MN2L 2-Bay Network Storage Enclosure is a storage device that allows you to share documents, files, and digital media such as music, photos, and video with everyone on the home or office network. With the FTP support, you could access your files remotely through the Internet. The built-in account management allows you to keep data safe by giving read-only or full read/write permissions to specific users or groups. Utilizing the latest SATA II technology, the MN2L supports hot-swap with RAID 1 (mirroring) and RAID 0 (stripping), allowing you to protect against hard drive failures or expanding your useable drive space. The MN2L supports PC (Windows 2000, XP, 2003 and Vista), MAC, or Linux-based computer on the network.

The MN2L's built-in iTunes Server Support provides music sharing from MN2L to your iTunes in PC or MAC. Its built-in BitTorrent (BT) download station allows downloading BT files without a powered-on computer. "The contemporary and stylish design of the MN2L, as well as its considerate features, makes it an ideal network storage sharing platform," stated Grandy Chen, Sans Digital's Executive Vice President. "The compactness of the MN2L makes it an ultimate solution for personal and small business environments. At the same time, combining more than one MN2L together will give you an expanded solution for larger business settings."
